

## MPDP INSTALLATION CASE-STUDY

### NEW ZEALAND TRANSPORT AGENCY (NZTA) 4 x 4 CONFIGURATION, 16 PANELS

The NZTA Traffic Operations Centre, a major \$6 million dollar new initiative to ease congestion and deliver economic benefits to the region, opened in April 2010.

A 14m wide video wall (New Zealand's largest) provided and installed by VideoPro is "the electric eyes" of the traffic management operators who work in the operations centre. The wall, made of 36 Orion PDP panels is used to monitor street and motorway cameras both in Auckland and throughout New Zealand.

More than 200 closed circuit cameras transmit live images of state highways, motorways and local roads into the control room for operators to monitor traffic flows, manage roadside incidents and adjust 700 sets of traffic signals.
